DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on August 17, 2005 has been entered.

Allowable Subject Matter

2. Claims 1-129 are allowed.

3. The following is an examiner's statement of reasons for allowance:

U. S. Publication 2004/00001194 to Wilstrup et al. is the reference closest to the claimed invention. Wilstrup et al. disclose a method of analyzing a measurable distribution having random components and deterministic components, comprising the steps of: (a) collecting data from a data signal; (b) constructing a probability density function based on the data such that the probability density function defines a distribution, wherein the probability density function is a convolution of deterministic functions and random functions; (c) construct a probability density function based on a convolution model having three or more parameters wherein at least one of the parameters are unknown, the convolution model having a deterministic model and a random model. However, Wilstrup et al. do not teach (d) determining unknown parameters by using a deconvolution process employed upon the probability density functions constructed in steps (b) and (c); and including all of the other limitations in the respective independent claims.
